This up-to-date book shows how assistive technology can be used in all kinds of classrooms, at all grade levels, to enhance the teaching and learning of students with a wide range of disabilities. The emphasis is on the integration of assistive technology into the curriculum. It addresses the challenges teachers face when using assistive technology to teach new skills to students with disabilities, to increase their independence and productivity, and to provide them with access to the general education curriculum. The text discusses disability categories within the context of school-related tasks and technology-based solutions to avoid misleading readers into simply pairing a certain diagnosis with a certain tech tool. The new edition of *Assistive Technology in the Classroom* keeps readers abreast of relevant new developments in mobile devices and assistive technology through a new chapter on how to use assistive technology to create visual supports and promote positive behavior, chapter updates on available mobile devices, expanded information on Universal Design for Learning, and additional ideas and discussion on how to match technology tools to a student's specific needs and strengths. The Enhanced Pearson eText features embedded videos.

The second edition of *Assistive Technology in the Classroom: Enhancing the School Experiences of Students with Disabilities*, clearly understands and addresses two of the most important aspects of assistive technology: that classroom technology changes rapidly, and that individual students with disabilities require personalized solutions when it comes to successfully completing daily, school-related tasks. With the first aspect in mind, the authors of this contemporary and engaging text have created a companion website that will keep students and instructors up to date with the most current adva

Other assistive technology devices help students with listening, sitting, and even grasping a pencil. But the iPad and other tablets have opened up the world of technology to the average classroom and have been instrumental in helping some of the most challenged students read, talk, and connect. Another study looking at math skills for second-graders with learning disabilities using hand-held computer-assisted instruction, found that students improved their subtraction scores by an average 17 percent. Students at the IDEAL school use a large keyboard to help students with fine motor and visual impairment. The keys are also color coded to make it easier to pick out the letters.
