The Southern African vlei rat (*Otomys irroratus*) is a species of rodent in the vlei rat genus, *Otomys*, of the family Muridae in the order Rodentia. This is the type species of the genus. It is native to the grasslands and swamps of southern Africa where it is a common species. The Southern African Vlei Rat is a large-sized rat with dense and continuously replaced shaggy fur. The head is large, the ears small, and the tail short. The dorsal parts are generally gray, brown, or black. The ventral parts Boston, MA: Houghton Mifflin company, 1969. â€” 289 p. Many books have been published on African mammals. Some are purely technical, such as checklists of species found within a particular area, with their scientific names and range; others deal with only one of the African countries. They are of invaluable help for the scientist, but less useful for the layman. However, there has been no Field Guide to the mammals of the whole continent south of the Sahara, and the need for one has often struck us while walking or driving through different regions of Africa. Hence this book.
