Climate change adaptation solutions for all The close collaboration between multiple stakeholders has brought Denmark to the forefront of research, technology development, know-how and best-practice in adapting to climate changes. Danish experience shows that an integrated approach to climate adaption is cost-efficient and creates added value for cities. Interested in more? For further information on climate change adaptation, please contact Cecilie Buch Thomsen, Senior Project Manager, cbt@stateofgreen.com. About State of Green. State of Green is a not-for-profit, public-private partnership f

Adaptation means anticipating the adverse effects of climate change and taking appropriate action to prevent or minimise the damage they can cause, or taking advantage of opportunities that may arise. It has been shown that well planned, early adaptation action saves money and lives later. Examples of adaptation measures include: using scarce water resources more efficiently; adapting building codes to future climate conditions and extreme weather events; building flood defences and raising the levels of dykes; developing drought-tolerant crops; choosing tree species and forestry practices less
