Copyright © HarperCollins Publishers.

Statistics at Square One. 13. Study design and choosing a statistical test. 13. Study design and choosing a statistical test. It is usual to adopt a pragmatic approach and analyse by intention to treat, that is analyse the study by the treatment that the subject was assigned to, not the one they actually took. The alternative is to analyse per protocol or on study. Drop outs should of course be reported by treatment group. Cross sectional studies are common and include surveys, laboratory experiments and studies to examine the prevalence of a disease. Studies validating instruments and questionnaires are also cross sectional studies. Learning Outcomes. Students will gain some knowledge of a broad range of statistical techniques that are commonly used in clinical, epidemiological, and public health research. They will be competent users of a computer program (Stata) to analyse data. Learning and Teaching. Campus Teaching Dates. This course is held at TAmaki Campus. Michael Campbell and David Machin. Wiley and Sons. Learning statistics with R: A tutorial for psychology students and other beginners. (Version 0.4). Daniel Navarro University of Adelaide daniel.navarro@adelaide.edu.au. Much of statistics is basically a safeguard. Using "common sense" to evaluate evidence means trusting gut instincts, relying on verbal arguments and on using the raw power of human reason to come up with the right answer. Most scientists don't think this approach is likely to work. In fact, come to think of it, this sounds a lot like a psychological question to me, and since I do work in a psychology department, it seems like a good idea to dig a little deeper here. Is it really plausible to think that this "common sense" approach is very trustworthy?
