Allied health care professionals share the responsibility of ensuring that the duty owed to patients is appropriately carried out by the clinic or facility department. As the primary health care provider of patient care, nursing personnel are often the most capable of establishing, continuing, and evaluating systems for risk management and quality assurance. Nurses are also the primary source of data from which programs are developed. Cooperation of nursing personnel in clinics or hospitals therefore is essential in the developing and maintenance of a risk management or quality assurance program. Allied personnel typically have regular interaction with patients, so you should enjoy working with people to be in allied health. Also, as a technician or assistant, you will be working in a supportive role, assisting nurses and doctors with their work. Therefore you should be able to take direction well, and also work effectively as part of a medical team.Â Therefore, to be an effective and successful allied healthcare professional, you not only need to work very well with people, but also be comfortable with the highly specialized medical equipment. Your training program will train you thoroughly on the equipment you will need to operate in your role, but it will help if you already enjoy working with technology. Schedule and Compensation. Cornelly Allied Health Education Center, Methodist Hospital, Indiana Inc., Indianapolis. Abstract. Teaching students to communicate effectively with patients has always been part of the radiography curriculum in the USA.Â Radiographers who practise effective communication techniques with their patients can alleviate anxiety and make an important contribution to the overall satisfaction of the patient with respect to the quality of service and care they receive. This article describes instructional methods being used in the USA to help develop effective patient communication techniques, and reports the findings of a study among radiography educators as to which of these methods are thought to be most successful. PMID: 2222793.
