Information technology helps in developing automated processes for businesses. This not only helps in reducing the cost of operation but also saves time. The time saved can be utilized to focus on other tasks, thus speeding up business processes significantly.Â Implementation of information technology provides the ability to remotely access your companyâ€™s network. As a result, it equips employees with the ability to get the work done even if they are not physically present at the workplace. Such agility has a number of benefits.Â Almost every software that businesses use has open source variants that are widely available on the Internet. Utilizing these could mean multiple benefits at reduced expenses. Since information technologies have become critical to business success as a tool for organizational innovation, successful implementation of IT innovation is viewed as one of the most crucial tasks for many organizations. The paper examines the effects of the contextual factors on the implementation of the client/server system as an interrelated IT innovation. The authors clarify the concept of IT innovation by distinguishing between IT innovation object and IT innovation process. Four typesâ€™;
