Educational psychology also allows the teacher to know the classroom teaching and learning process by providing the teacher with a better understanding of principles involved in the process of learning and teaching which are vital in a school setting (Husan and Postlewaite, 1994). Smith (2012), articulates that a better understanding of classroom teaching and learning principles by the teacher is helpful for transacting the content to the students effectively, which includes classroom climate and the teaching competence which are required for effective communication and presentation of content

In today's complex educational system, educational psychologists work with educators, administrators, teachers, and students to learn more about how to help people learn best. This often involves finding ways to identify students who may need extra help, developing programs aimed at helping students who are struggling and even creating new learning methods. Some of the different topics that educational psychologists are interested in include: Educational Technology: Looking at how different types of technology can help students learn. Instructional Design: Designing learning materials. Throughout history, a number of figures have played an important role in the development of educational psychology. Some of these well-known individuals include Educational psychology applies the psychological principles that underlie learning in both formal and informal educational settings. Learning and teaching approaches. A major portion of the course will be taught using an interactive, student-centred teaching approach through the following methods. Unit 1 explores the difference between psychology and educational psychology and the latter's significance in classroom practices. Educational psychology can be understood as the study of learners, learning, and teaching, all subsumed under the heading "educational psychology". This definition can be expanded to include the knowledge, wisdom, and everyday theory that all teachers require in their classroom practices. More recently, positive psychologists have advocated for positive psychology in schools alongside traditional psychology. This movement can be called positive education. In other words, positive education wants to bring positive psychology's goals of well-being and mental health support for everyone into the school setting. Psychological interventions have been around in schools since at least the 1930s, so it makes sense to supplement the already-existing traditional psychology in schools with positive psychology (Shankland & Rosset, 2017). Do emotional support and classroom organization earlier in the year set the stage for higher quality instruction? *Journal of School Psychology*, 51(5), 557-569. doi:10.1016/j.jsp.2013.06.001.

Educational psychology is the branch of psychology concerned with the scientific study of human learning. The study of learning processes, from both cognitive and behavioral perspectives, allows researchers to understand individual differences in intelligence, cognitive development, affect, motivation, self-regulation, and self-concept, as well as their role in learning. The field of educational psychology relies heavily on quantitative methods, including testing and measurement, to enhance Educational psychology in turn informs a wide range of specialities within educational studies, including instructional design, educational technology, curriculum development, organizational learning, special education and classroom management. Educational psychology both draws from and contributes to cognitive science and the learning sciences. In universities, departments of educational psychology are usually housed within faculties of education, possibly accounting for the lack of representation of educational psychology content in introductory psychology textbooks.[1]. Contents. 1 Social, For clarity, psychologists sometimes distinguish gender differences, which are related to social roles, from sex differences, which are related only to physiology and anatomy. Using this terminology, gender matters in teaching more than sex (in spite of any jokes told about the latter!). Although there are many exceptions, boys and girls do differ on average in ways that parallel conventional gender stereotypes and that affect how the sexes behave at school and in class. The differences have to do with physical behaviors, styles of social interaction, academic motivations, behaviors, and choic
