**The 15th International Meeting  
on Fully Three-Dimensional Image Reconstruction  
in Radiology and Nuclear Medicine**

Volume 11072

Proceedings of SPIE 0277-786X, V. 11072

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *15th International Meeting on Fully Three-Dimensional Image Reconstruction in Radiology and Nuclear Medicine*, edited by Samuel Matej, Scott D. Metzler, Proceedings of SPIE Vol. 11072 (SPIE, Bellingham, WA, 2019) Seven-digit Article CID Number.

---

Paper Numbering: Proceedings of SPIE follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

xix	<i>Conference Sponsors</i>
xxi	<i>Introduction</i>

---

## SESSION 1 DEEP LEARNING WITHIN CT RECONSTRUCTION

---

11072 02	A hierarchical approach to deep learning and its application to tomographic reconstruction (DL-1.1)
11072 03	Quality-guided deep reinforcement learning for parameter tuning in iterative CT reconstruction (DL-1.2)
11072 04	A machine learning approach to construct a tissue-specific texture prior from previous full-dose CT for Bayesian reconstruction of current ultralow-dose CT images (DL-1.3)
11072 05	Low-dose CT reconstruction assisted by a global CT image manifold prior (DL-1.4)
11072 06	Learned primal-dual reconstruction for dual energy computed tomography with reduced dose (DL-1.5)

---

## SESSION 2 ITERATIVE RECONSTRUCTION IN CT

---

11072 07	Statistical iterative reconstruction for spectral phase contrast CT (CT-1.1)
11072 08	Application of Proximal Alternating Linearized Minimization (PALM) and inertial PALM to dynamic 3D CT (CT-1.2)
11072 09	Convergence criterion for MBIR based on the local noise-power spectrum: Theory and implementation in a framework for accelerated 3D image reconstruction with a morphological pyramid (CT-1.3)
11072 0A	Contrast-medium anisotropy-aware tensor total variation model for robust cerebral perfusion CT reconstruction with weak radiation: a preliminary study (CT-1.4)

- 11072 0B Clinical study of soft-tissue contrast resolution in cone-beam CT of the head using multi-resolution PWLS with multi-motion correction and an electronic noise model (CT-1.5)
- 11072 0C Adaptive smoothing algorithms for MBIR in CT applications (CT-1.6)

SESSION 3 CT CORRECTIONS

---

- 11072 0D Motion gradients for epipolar consistency (CT-2.1)
- 11072 0E A motion estimation and compensation algorithm for 4D CBCT of the abdomen (CT-2.2)
- 11072 0F A preliminary study on explicit compensation for the non-linear-partial-volume effect in CT (CT-2.3)
- 11072 0G Reduction of irregular view-sampling artifacts in a stationary gantry CT scanner (CT-2.4)
- 11072 0H Reduction of metal artefacts in CBCT caused by needles crossing the FOV border (CT-2.5)

SESSION 4 PET RECONSTRUCTION

---

- 11072 0I Simultaneous micro-PET imaging of F-18 and I-124 with correction for triple-random coincidences (EM-1.1)
- 11072 0J Application of the pseudoinverse for real-time 3D PET image reconstruction (EM-1.2)
- 11072 0K Non-TOF fourier-based analytic reconstruction from TOF histo-projections for high resolution TOF scanners (EM-1.3)
- 11072 0L Preliminary investigation of optimization-based image reconstruction for TOF PET with sparse configurations (EM-1.4)
- 11072 0M Rapid construction of system response matrix based on geometric symmetries for the quad-head PET system (EM-1.5)
- 11072 0N Extension of emission EM look-alike algorithms to Bayesian algorithms (EM-1.6)

SESSION 5 DEEP LEARNING WITHIN PET RECONSTRUCTION

---

- 11072 0O MAPEM-Net: an unrolled neural network for Fully 3D PET image reconstruction (DL-2.1)
- 11072 0P Generative adversarial networks based regularized image reconstruction for PET (DL-2.2)

- 11072 0Q Motion correction of respiratory-gated PET image using deep learning based image registration framework (DL-2.3)
- 11072 0R Direct patlak reconstruction from dynamic PET using unsupervised deep learning (DL-2.4)
- 11072 0S On the impact of input feature selection in deep scatter estimation for positron emission tomography (DL-2.5)

SESSION 6 CT RECONSTRUCTION AND IMAGING

---

- 11072 0T Theoretically-exact filtered-backprojection reconstruction from real data on the line-ellipse-line trajectory (CT-3.1)
- 11072 0U Optimization of cone-beam CT scan orbits for cervical spine imaging (CT-3.2)
- 11072 0V Low frequency recovery in 16cm coverage axial multi-detector computed tomography (CT-3.3)
- 11072 0W Performance analysis for nonlinear tomographic data processing (CT-3.4)
- 11072 0X Simulating lower-dose scans from an available CT scan (CT-3.5)
- 11072 0Y Optimized conversion from CT numbers to proton relative stopping power based on proton radiography and scatter corrected cone-beam CT images (CT-3.6)

SESSION 7 SPECTRAL CT / MATERIAL DECOMPOSITION

---

- 11072 0Z Local response prediction in model-based CT material decomposition (CT-4.1)
- 11072 10 Image-domain multi-material decomposition using a union of cross-material models (CT-4.2)
- 11072 11 Optimized spatial-spectral CT for multi-material decomposition (CT-4.3)
- 11072 12 Photon-counting Spectral CT with De-noised Principal Component Analysis (PCA) (CT-4.4)
- 11072 13 Known-component model-based material decomposition for dual energy imaging of bone compositions in the presence of metal implant (CT-4.5)

SESSION 8 SPECT IMAGING

---

- 11072 14 Investigation of a Monte Carlo simulation and an analytic-based approach for modeling the system response for clinical I-123 brain SPECT imaging (EM-2.1)

- 11072 15 Preliminary investigation of AdaptiSPECT-C designs with square or square and hexagonal detectors employing direct and oblique apertures (EM-2.2)
- 11072 16 GPU-accelerated generic analytic simulation and image reconstruction platform for multi-pinhole SPECT systems (EM-2.3)

---

SESSION 9 OTHER NOVEL APPLICATIONS AND APPROACHES

---

- 11072 17 Exact inversion of an integral transform arising in passive detection of gamma-ray sources with a Compton camera (OT-1)
- 11072 18 Task-driven acquisition in anisotropic x-ray dark-field tomography (OT-2)
- 11072 19 A step toward a clinically viable ABI phase-contrast imaging: double emission line artifacts correction (OT-3)
- 11072 1A Registration methods to enable augmented reality-assisted 3D image-guided interventions (OT-4)

---

SESSION 10 DEEP LEARNING FOR IMAGE DENOISING AND CHARACTERIZATION

---

- 11072 1B Feature aware deep learning CT image reconstruction (DL-3.1)
- 11072 1C Low-dose CT image denoising without high-dose reference images (DL-3.2)
- 11072 1D Deep learning based adaptive filtering for projection data noise reduction in x-ray computed tomography (DL-3.3)
- 11072 1E Population and individual information guided PET image denoising using deep neural network (DL-3.4)
- 11072 1F Comparison of deep learning and human observer performance for lesion detection and characterization (DL-3.5)

---

SESSION 11 QUANTITATIVE METHODS IN PET

---

- 11072 1G A linear estimator for timing calibration in time-of-flight PET (EM-3.1)
- 11072 1H Joint reconstruction of activity and attenuation with autonomous scaling for time-of-flight PET (EM-3.2)
- 11072 1I Dynamic PET imaging with the generalized method of moments (EM-3.3)
- 11072 1J Multiresolution spatiotemporal mechanical model of the heart as a prior to constrain the solution for 4D models of the heart (EM-3.4)

POSTER SESSION I

---

- 11072 1K Analysis of scatter artifacts in cone-beam CT due to scattered radiation of metallic objects (P-1.1)
- 11072 1L CTL: modular open-source C++-library for CT-simulations (P-1.2)
- 11072 1M Photon-counting CBCT iterative reconstruction for adaptive proton therapy (P-1.3)
- 11072 1N A fast gradient-based algorithm for image reconstruction in inverse geometry CT architecture with sparse distributed sources (P-1.4)
- 11072 1O Clipping-induced bias correction for low-dose CT imaging (P-1.5)
- 11072 1P Multislice anthropomorphic model observer for detectability evaluation on breast cone beam CT images (P-1.6)
- 11072 1Q Low-dose photon counting CT reconstruction bias reduction with multi-energy alternating minimization algorithm (P-1.7)
- 11072 1R Noise reduction in photon-counting CT using frequency-dependent optimal weighting (P-1.8)
- 11072 1S Reduction of beam hardening induced metal artifacts using consistency conditions (P-1.9)
- 11072 1T Beam hardening correction using pair-wise fan beam consistency conditions (P-1.10)
- 11072 1U Bone sparsity model for computed tomography image reconstruction (P-1.11)
- 11072 1V Edge-masked CT image reconstruction from limited data (P-1.12)
- 11072 1W Real-time GPU implementation of a weighted filtered back-projection algorithm for stationary gantry CT reconstruction (P-1.13)
- 11072 1X Toward quantitative short-scan cone beam CT using shift-invariant filtered-backprojection with equal weighting and image domain shading correction (P-1.14)
- 11072 1Y Double-helix trajectory for image guided radiation therapy: geometry and image reconstruction (P-1.15)
- 11072 1Z Combination of CT motion simulation and deep convolutional neural networks with transfer learning to recover Agatston scores (P-1.16)
- 11072 20 A sinogram inpainting method based on generative adversarial network for limited-angle computed tomography (P-1.17)
- 11072 21 Bone induced artifacts elimination using two-step convolutional neural network (P-1.18)

- 11072 22 A deep learning approach for dual-energy CT imaging using a single-energy CT data (P-1.19)
- 11072 23 Learned digital subtraction angiography (Deep DSA): method and application to lower extremities (P-1.20)
- 11072 24 Low-dose cerebral CT perfusion restoration via non-local convolution neural network: initial study (P-1.21)
- 11072 25 Direct image reconstruction from raw measurement data using an encoding transform refinement-and-scaling neural network (P-1.22)
- 11072 26 A hybrid ring artifact reduction algorithm based on CNN in CT images (P-1.23)
- 11072 27 GCC-based extrapolation of truncated CBCT data with dimensionality-reduced extrapolation models (P-1.24)
- 11072 28 Non-uniformity correction for photon-counting detectors using double GANs (P-1.25)
- 11072 29 Synthesize monochromatic images in spectral CT by dual-domain deep learning (P-1.26)
- 11072 2A Green's one-step-late algorithm dose not work for SPECT with attenuation correction (P-1.27)
- 11072 2B Super-iterative image reconstruction in PET (P-1.28)
- 11072 2C Reconstruction performance for long axial field-of-view PET scanners with large axial gaps (P-1.29)
- 11072 2D Versatile regularisation toolkit for iterative image reconstruction with proximal splitting algorithms (P-1.30)
- 11072 2E Multi-streaming and multi-GPU optimization for a matched pair of Projector and Backprojector (P-1.31)
- 11072 2F Bulk motion detection and correction using list-mode data for cardiac PET imaging (P-1.32)

---

POSTER SESSION II

- 11072 2G Truncation artifacts caused by the patient table in polyenergetic statistical reconstruction on real C-arm CT data (P-2.1)
- 11072 2H K-edge imaging visualization of multi-material decomposition in CT using virtual mono-energetic images (P-2.2)
- 11072 2I Scatter correction using pair-wise fan beam consistency conditions (P-2.3)

- 11072 2J Enhanced spatial resolution in cone beam X-ray luminescence computed tomography using primal-dual Newton conjugate gradient method (P-2.4)
- 11072 2K Linear interpolation based structure preserved metal artifact reduction in x-ray computed tomography (P-2.5)
- 11072 2L Curvature constraint based image reconstruction for limited-angle computed tomography (P-2.6)
- 11072 2M Fast ordered subsets Chambolle-Pock algorithm for CT reconstruction (P-2.7)
- 11072 2N Attenuation correction for x-ray fluorescence computed tomography (XFCT) utilizing transmission CT image (P-2.8)
- 11072 2O Multi-energy computed tomography reconstruction using an average image induced low-rank tensor decomposition with spatial-spectral total variation regularization (P-2.9)
- 11072 2P Statistical iterative material image reconstruction with patch based enhanced 3DTV regularization for photon counting CT (P-2.10)
- 11072 2Q Reducing high-density object artifacts with iterative image reconstruction in digital tomosynthesis (P-2.11)
- 11072 2R Artifacts reduction method in 4DCBCT based on a weighted demons registration framework (P-2.12)
- 11072 2S A field of view based metal artifact reduction method with the presence of data truncation (P-2.13)
- 11072 2T Inverse-geometry CT with linearly distributed source and detector: stationary configuration and direct filtered-backprojection reconstruction (P-2.14)
- 11072 2U Efficient nullspace-constrained modifications of incompletely sampled CT images (P-2.15)
- 11072 2V Dynamic angle selection for few-view X-ray inspection of CAD based objects (P-2.16)
- 11072 2W Non-uniformity correction for MARS photon-counting detectors (P-2.17)
- 11072 2X Evaluation of image quality of a deep learning image reconstruction algorithm (P-2.18)
- 11072 2Y A novel transfer learning framework for low-dose CT (P-2.19)
- 11072 2Z Quadratic autoencoder for low-dose CT denoising (P-2.20)
- 11072 30 Reconstructing interior transmission tomographic images with an offset-detector using a deep-neural-network (P-2.21)
- 11072 31 Information retrieval in x-ray imaging with grating interferometry using convolution neural network (P-2.22)

- 11072 32 A spatial information incorporation method for irregular sampling CT based on deep learning (P-2.23)
- 11072 33 Projection super-resolution based on convolutional neural network for computed tomography (P-2.24)
- 11072 34 Medical (CT) image generation with style (P-2.25)
- 11072 35 Awake preclinical brain PET imaging based on point sources (P-2.26)
- 11072 36 EM-ML algorithm based on continuous-to-continuous model for PET (P-2.27)
- 11072 37 Parametric image estimation using Residual simplified reference tissue model (P-2.28)
- 11072 38 Virtual clinical trials using 3D PET imaging (P-2.29)
- 11072 39 Fiber assignment by continuous tracking for parametric fiber reinforced polymer reconstruction (P-2.30)
- 11072 3A elsa - an elegant framework for tomographic reconstruction (P-2.31)
- 11072 3B Spectral CT reconstruction algorithm based on adaptive tight frame wavelet and total variation (P-2.32)
- 11072 3C Study on spectral CT material decomposition via deep learning (P-2.33)

Fully3D is a workshop-style conference focusing on algorithmic and computational methods for reconstruction of multi-dimensional data sets typically acquired using CT, PET, or SPECT. It is well known for bringing together experts in the field in an informal setting for greater depth of discussion on issues pertaining to reconstruction. The fact that nearly all recent major advances in image reconstruction have been first presented at the Fully3D meeting emphasizes the high relevance of this meeting. Due to limitations in our seating capacity, the registration site may be closed early and no fu Proceedings of the Seventh International Conference on Fully Three-Dimensional Reconstruction in Radiology and Nuclear Medicine.
