The term deep sea creature refers to organisms that live below the photic zone of the ocean. These creatures must survive in extremely harsh conditions, such as hundreds of bars of pressure, small amounts of oxygen, very little food, no sunlight, and constant, extreme cold. Most creatures have to depend on food floating down from above. These creatures live in very demanding environments, such as the abyssal or hadal zones, which, being thousands of meters below the surface, are almost completely

Sporting an elongated snout and needle-like teeth, the most terrifying thing about this deep sea dweller is its highly extendable jaws. They are able to instantly snap forward to capture prey. Bonus creepy fact: The goblin shark's skin is semi-transparent, so that pinkish hue you see is actually a direct look at their insides.Â This menacing creature is one of the deepest-living fish ever discovered. It has been recorded as far down as 5,000 metres below sea level, where the pressure is 500 times greater than that of land. Bonus creepy fact: The fangtooth holds another title to its name: the largest teeth of any marine species, relative to the size of its body. These are some of the scariest deep sea creatures that would give you nightmare! * Collosal Squid Thought the colossal squid was a made-up legend? Think again, because this marine creature is no bedtime story. Current estimates put its maximum siz...Â Iâ€™m more afraid of Oceanic Sharks and Saltwater Crocodiles and Lionâ€™s Mane Jelly Fish and Sea Snakes and South Sea Cone Shells, animals that live in the parts of the ocean that I like to be in and could actually kill me. Iâ€™d still like to swim with a Great White outside of a cage though. 535 views Â View 3 Upvoters Â Answer requested by.

The recent boost in deep-sea research has revealed that many trenches contain similar animals living at comparable depths - even those in opposite hemispheres. The researchers have been able to look at the animal's behaviour. But while the creatures are closely related, each trench seems to have its own specific species. Dr Alan Jamieson explains: "Take the snail fish. "In the Japan Trench, there is that one particular snail fish, but there is another species of snail fish in the Kermadac Trench, and there is another one in the Puerto Rico Trench - and they are all very closely related. Deep sea creatures: the ocean depths are home to a phantasmagoria of bizarre creatures, ranging from the Fangtooth to the "vampire squid from hell." Living in the dark at crushing depths, the animals in this list are rarely seen by human beings. "drunken slug". The abyss. What others are saying. The Dragonfish lives in deep ocean waters at depths of up to 5000 feet (1,500 meters). They are found in most tropical regions around the world. I want this as a pet.
