Principles and practice of screening for disease. J. M. g. wilson.Â The essential difference between this form of screening and ordinary good medical practice is that in the first instance the person examined is presumptively well, or at least not complaining of the disease or diseases for which screeningif offered, while in the second he or she comes to the physician as a patient with a complaint. There is really a good deal of difference between these two concepts;the economic implications for a general practitioner in terms of time, auxiliary help and the use of records, as well as premises, are very different if he is aiming to carry out selective screenin
